

AI Visibility Baseline - Sample Report

Illustrative sample - 1BillionLinks - PRO package - 2026-06-28

SAMPLE / ILLUSTRATIVE. Prepared from a pilot run to show the deliverable format. Findings are a point-in-time baseline of how AI assistants currently answer brand questions; they are not a promise of future results.

1. What this report covers

AI Mention tests how today's AI assistants (ChatGPT, Gemini, Claude, Perplexity) currently answer real questions about your brand and keywords, captures those answers as evidence, reviews which brands and sources the AI associates with your niche, and turns the findings into crawlable support pages you can publish.

It is an AI visibility baseline and brand/entity association review - a measurable starting point you can re-test over time.

2. Snapshot

- Brand: 1BillionLinks (SEO link building & backlink services)
- Questions tested: 25 brand + keyword questions
- AI tools tested: ChatGPT, Gemini, Claude, Perplexity
- Crawlable support pages produced: 12 (with FAQ + WebPage schema)
- Evidence: full-page answer screenshots + a master data table

3. AI visibility baseline (the opportunity)

Across the questions tested, the AI assistants did not yet consistently recognise 1BillionLinks as a go-to brand for these keywords. This is a normal early-stage baseline for a brand that has not yet built strong topical associations in AI answers - and it is exactly the opportunity this service is designed to map.

In other words: there is open space to become one of the brands AI assistants reference for these topics, starting from a clear, measured baseline.

4. Competitor association insight

When asked about this niche, the AI assistants most often surfaced these brands. They show the associations currently occupying the space - useful targets to benchmark against:

- Link-building providers: FATJOE, Loganix, The HOTH, Authority Builders, Stan Ventures
- Press-release distribution: EIN Presswire, Newswire, PRWeb, Brandpush
- Authority measurement tools: Moz, Ahrefs, Semrush

5. Keywords tested

- SEO link building
- backlinks
- press release distribution
- domain authority
- tier 2 and tier 3 backlink campaigns

6. Opportunity areas & recommended next steps

- Publish the crawlable support pages so there is clear, on-topic content linking the brand to each target keyword.
- Prioritise the keywords where competitors are most strongly associated - these are the highest-value gaps to close.

- Re-test the same questions on a regular cycle to track how AI recognition of the brand changes over time.
- Strengthen brand/entity signals (consistent name, descriptions, and references) across the brand's own web presence.

7. What the full delivery includes

- Question set + full-page answer screenshots from each AI tool tested
- Master data table (questions, answers, sources, competitors, brand appearances)
- Crawlable support pages with schema + a sitemap
- This baseline report + an order brief, packaged as a delivery ZIP

8. Scope & disclaimer

This is an observational baseline. It documents how AI tools currently answer brand questions at a point in time. It does not inject, train, manipulate, or influence AI models, and it does not promise or guarantee AI mentions, LLM visibility, search rankings, or indexing. Publishing support pages helps discovery and crawling only.
